MISP restSearch module development

MISP RESTSEARCH MODULE DEVELOPMENT

BUILDING A SIMPLE EXPORT MODULE FOR THE CORE

CIRCL / TEAM MISP PROJECT

- Similar in scope to an **export module** of the MISP modules system
- Pros:
  - ▶ Can be used for composited data coming from a **filtered query**
  - ▶ Fast, **native approach**
  - ▶ Can be built to support **several scopes** (events, attributes, sightings)
- Cons...

2024-04-15

### └ Building a native restSearch export

- Similar in scope to an **export module** of the MISP modules system
- Pros:
  - ▶ Can be used for composited data coming from a **filtered query**
  - ▶ Fast, **native approach**
  - ▶ Can be built to support **several scopes** (events, attributes, sightings)
- Cons...

# BUILDING A NATIVE RESTSEARCH EXPORT

- Similar in scope to an **export module** of the MISP modules system
- Pros:
  - ▶ Can be used for composited data coming from a **filtered query**
  - ▶ Fast, **native approach**
  - ▶ Can be built to support **several scopes** (events, attributes, sightings)
- Cons...

## MISP restSearch module development

### └ Building a native restSearch export

BUILDING A NATIVE RESTSEARCH EXPORT

- Similar in scope to an **export module** of the MISP modules system
- Pros:
  - ▶ Can be used for composited data coming from a **filtered query**
  - ▶ Fast, **native approach**
  - ▶ Can be built to support **several scopes** (events, attributes, sightings)
- Cons...

# SO HOW DOES RESTSEARCH WORK?

- Standardised way of collecting **parameters**
- Using the parameters, a loop is started to **chunk and gradually build** our export data
- The chunk size depends on memory envelopes
- Each chunk is **converted piece by piece...**
- ... and subsequently are concatenated into a temporary file
- Once no more elements are left, the file is sent in the response

## MISP restSearch module development

2024-04-15

### └ So how does restSearch work?

- Standardised way of collecting parameters
- Using the parameters, a loop is started to **chunk and gradually build** our export data
  - The chunk size depends on memory envelopes
  - Each chunk is **converted piece by piece...**
  - ... and subsequently are concatenated into a temporary file
  - Once no more elements are left, the file is sent in the response

# WHERE DOES THE MODULE SYSTEM COME INTO PLAY?

## ■ The export modules handle 5 tasks:

- ▶ Pass **meta-information** back to restSearch on the export format itself
- ▶ Add a **start segment** to the exported data
- ▶ Do the actual **conversion** from MISP's internal format to the desired export format
- ▶ Provide a **separator** for data chunks
- ▶ Have a **closing segment** for the returned data, based on the formats conventions

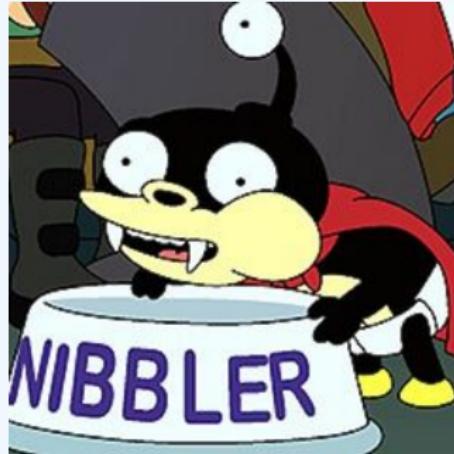

# MISP restSearch module development

# OUR LITTLE TRAINING MODULE: NIBBLER, THE EVER HUNGRY IDS/IPS

## MISP restSearch module development

2024-04-15

└ Our little training module: Nibbler, the ever hungry IDS/IPS

- Simplistic tool with its **own proprietary format**
- Meant to mimic a typical **in-house tool**
- Lightweight scope, for simplicity's sake
- **pipe separated values**
- **VALUE | TYPE | DESCRIPTION | REFERENCE | ACTION**

2024-04-15

## └ Nibbler

- Simplistic tool with its **own proprietary format**
- Meant to mimic a typical **in-house tool**
- Lightweight scope, for simplicity's sake
- **pipe separated values**
- **VALUE | TYPE | DESCRIPTION | REFERENCE | ACTION**

## NIBBLER FORMAT - CAVEATS

- Rules can be prepended by comments, each comment line starting with #
- Some characters have to be escaped in some custom, crazy ways
  - ▶ linebreaks: ##LINEBREAK##
  - ▶ commas: ##COMMA##
  - ▶ pipes: ##PIPE##

## MISP restSearch module development

2024-04-15

### └ Nibbler format - caveats

- Rules can be prepended by comments, each comment line starting with #
- Some characters have to be escaped in some custom, crazy ways
  - ▶ linebreaks: ##LINEBREAK##
  - ▶ commas: ##COMMA##
  - ▶ pipes: ##PIPE##

- **Value:** The actual indicator value
- **Type:** The format of the indicator
- **Description:** A quick description for analysts investigating the alert, why is this relevant
- **Reference:** A backreference that the analyst can use to find out more about the alert
- **Action:** What should Nibbler do if it trips over the value?

2024-04-15

## └ Nibbler format

    public $additional_params = array();
    public function handler(
        $data, $options = array()
    ) {}
    public function header(
        $options = array()
    ) {}
    public function footer() {}
    public function separator() {}
}
```

```
public $additional_params = array(  
    'flatten' => 1  
);
```

2024-04-15

## └ Additional parameters

```
public $additional_params = array(  
    'flatten' => 1  
);
```

## ADDING OUR MAPPING

```
private $__mapping = array(  
    'ip_dst' => 'IP',  
    'ip_src' => 'IP',  
    'domain' => 'Domain',  
    'domain|ip' => ['Domain', 'IP'],  
    'hostname' => 'Hostname',  
    'md5' => 'MD5',  
    'sha1' => 'SHA1',  
    'sha256' => 'SHA256',  
    'filename|md5' => array('Filename', 'MD5'),  
    'malware-sample' => array('Filename', 'MD5'),  
    'filename|sha1' => array('Filename', 'SHA1'),  
    'filename|sha256' => array('Filename', 'SHA256')  
);
```

## MISP restSearch module development

2024-04-15

### └ Adding our mapping

```
private $__mapping = array(  
    'ip_dst' => 'IP',  
    'ip_src' => 'IP',  
    'domain' => 'Domain',  
    'domain|ip' => ['Domain', 'IP'],  
    'hostname' => 'Hostname',  
    'md5' => 'MD5',  
    'sha1' => 'SHA1',  
    'sha256' => 'SHA256',  
    'filename|md5' => array('filename', 'MD5'),  
    'malware-sample' => array('filename', 'MD5'),  
    'filename|sha1' => array('filename', 'SHA1'),  
    'filename|sha256' => array('filename', 'SHA256')  
);
```

## WRITING THE START OF THE OUTPUT

```
public function header($options = array())
{
    return sprintf(
        "# Nibbler rules generated by MISP at %s\n",
        date('Y-m-d H:i:s')
    );
}
```

## MISP restSearch module development

2024-04-15

└ Writing the start of the output

```
public function header($options = array())
{
    return sprintf(
        "# Nibbler rules generated by MISP at %s\n",
        date('Y-m-d H:i:s')
    );
}
```

```
public function footer()  
{  
    return "\n";  
}
```

2024-04-15

└ Footer function - how should the output end?

```
public function footer()  
{  
    return "\n";  
}
```

# WHAT SEPARATES THE CHUNKS?

```
